Bb Tenor Slide Trombone
M6600 “Gran Symphonic”

Live the Perfection!

“Sounds new, yet familiar.” The credo from Miraphone.

How does one rise above expectations while remaining true to one's heritage and style? It is actually quite simple, in that one must continually set new standards without sacrificing tradition. The future relies heavily on the past.

Choosing a brass instrument from Miraphone indicates a clear commitment to perfect worlds of sound. The musician has high expectations for his or her instrument – whether it be for work or for play.

Bb Tenor Slide Trombone M6600 “Gran Symphonic” (wide, quart valve, large, open wrap)

The tenor slide trombone M6600 is the consequent further development of the successful predecessor model M6500. The body was modified in a way that the trombone sounds clearer and more open, with a more direct response. Also new is the trigger on this trombone: its concave design provides better support for the thumb and improves the handling significantly.

The original Miraphone quart valve gives the M6600 an excellent sound projection. The exchangeable leadpipes offer optimum possibilities to create your individual sound ideas.

Characteristic

The new M6600 produces a dark, mellow sound, and the natural tones sit extremely well. Throughout the entire dynamic spectrum as well as in all registers, this instrument is easily and comfortably controlled. The response behavior gives the brass player the security to successfully master even the most difficult passages – whether it be in wind band or in symphony orchestra.

Technical Data

- bell diameter 220 mm (8,661 inch)
- 443 Hz
- Miraphone trombone valve
- single rotor lever concave in shape
- single rotor large (F)
- without lyre holder
